ARE YOU BUGGING OUT?
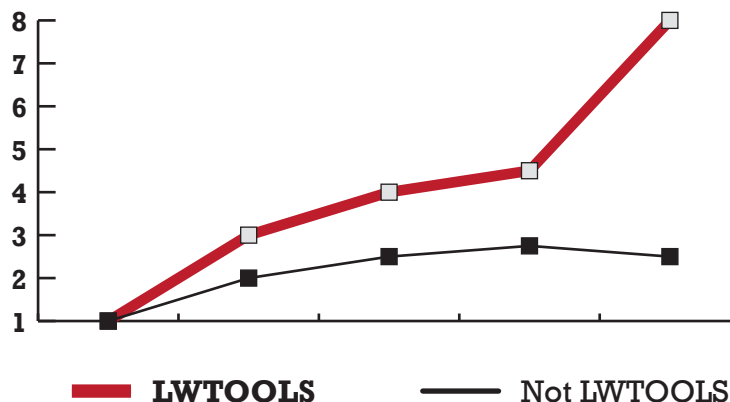

MAYBE IT'S TIME TO UPGRADE YOUR TOOL SET

LWTOOLS MAKES BINS, NOT BUGS

LWTOOLS is a set of cross development tools for the Motorola 6809 and Hitachi 6309 microprocessors. It supports assembling to raw binaries, CoCo LOADM binaries, and a proprietary object file format for later linking. It also supports macros and file inclusion among other things.

LWTOOLS was born in 2006 when William Astle decided that none of the cross assemblers available at the time supported all the features he wanted to use.

After over two years of intermittent development, and three separate releases of **LWASM** and one separate release of **LWLINK, LWTOOLS** is now complete.

LWTOOLS has recently been recognized as the official assembler of the world famous NitrOS-9 project!

LWTOOLS is available now on all the internets.

The question isn't whether you can afford LWTOOLS. The question is whether you can afford not to!
